NEWS RELEASE

CEBIC TECHNOLOGIES OFFERS COMPUTER HARDWARE AS A SERVICE

Denver, Colorado – March, 2007 – Cebic Technologies has introduced a new service to take the pain out of maintaining a efficient computer network for small to mid-size companies. Through a new “Hardware as a Service” offering, Cebic Technologies provides hardware procurement and replacement, remote IT monitoring and network management all for a fixed monthly fee.

“Under this service, Cebic technicians develop an IT configuration that works for your business, purchase and install the system and provide managed services to assure that the system is working satisfactory” explains Cebic president Beate Hybinette. “The hardware and software are owned by Cebic Technologies. We take the responsibility for maintaining and replacing equipment, purchasing and upgrading software and appliances, such as backup systems, and providing technical support. All the business manager has to do to add a computer, change out a monitor, or modify the IT setup is to make a phone call.”

Hardware-as-a-service is a relatively new concept in the managed services industry, with the first contracts offered in 2006. But, given the complexity of today’s computer networks, the approach can make considerable sense for smaller businesses, Hybinette maintains.

“The goal of managed services is to provide businesses with the ability to focus on making money, not keeping up with computer technology,” she said.

Cebic Technologies was founded in 1997 to provide security solutions for entrepreneurial businesses, including remote intelligence monitoring of computer networks, virus screening, software updates, hardware and software status control and intrusion detection.

For more information, contact Cebic Technologies at 1-888-232-4226 or visit www.cebic.com.
