

## Stop system errors before they adversely impact your business.

IntelliEye™ is a revolutionary monitoring service that protects your business' computer assets 24/7/365 through hardware and software health monitoring and host-based intrusion detection.

IntelliEye is backed by IT experts with top certifications in computer technology and security, including the CISSP (Certified Information System Security Professional), CISM (Certified Information Security Manager), ISSAP (Information Systems Security Architecture Professional), ISSMP (Information Systems Security Management Professional) and Microsoft MCSE 2003 Security+, MCSA, MC, MCP+I designations.

- » **Screen the health and stability of your computer assets 24/7**
- » **Minimize computer downtime and loss of productivity**
- » **Monitor internet accessibility and network traffic 24/7**
- » **Prevent intruders from gaining access to your computer system**
- » **Detect and resolve network problems**
- » **Outsource your network monitoring to Cebic's Managed Services Team**

Implemented through Cebic Technologies' innovative Remote Intelligence® Network Operations Center, IntelliEye ensures the highest level of protection from computer system failures, and cyber intruders at a fraction of the cost of in-house expertise. IntelliEye continuously monitors the health of your computer network systems through error logs, disk and task performance monitors, system errors and hardware component stability. Alerts will prompt technicians to take care of the problems before you experience data losses or costly downtime.

With IntelliEye, you reduce the risk of computer errors bringing your business to a standstill. Start today by safeguarding the data stored on your computers. Keep your computer hardware and software functioning at optimal performance, free from system errors and malicious programs that could exploit your internet access for illegal activities.

## Standard Features

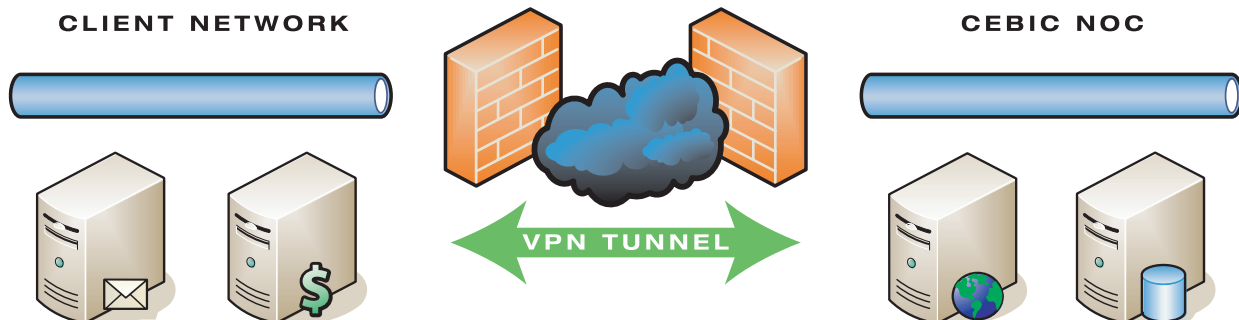

- » Captures critical events on the host server via IntelliEye™ technology
- » Separates events via advanced filtering technologies at Cebic's Remote Intelligence® Network Operation Center
- » 24/7 monitoring and response to all critical alarms by Cebic's Remote Intelligence® NOC team
- » Custom policies configured for each individual server
- » Optional monthly activity reports

## Requirements

- » Broadband access and static IP address
- » Microsoft Server OS on host
- » Firewall with VPN tunnel capability

## Optional Service
