CEBIC TECHNOLOGIES OFFICER TO SPEAK AT NATIONAL INVESTMENT ADVISOR CONFERENCE MAY 7, 2007

Denver, Colorado – November 2006 – Johan Hybinette has been selected as a presenter at the 2007 NAAIM Uncommon Knowledge conference in Orlando, Florida, May 7th. Hybinette, who holds top security designations and serves as chief technical officer for IT security firm Cebic Technologies, will address IT security issues for financial advisors .

NAAIM – the National Association of Active Investment Managers – is a peer group of more than 200 registered investment advisers and money managers from throughout the U.S. Investment advisers face a myriad of security issues from maintaining the privacy and confidentiality of client account and personal information to preserving electronic communications for regulatory review. Many of the money management firms are relatively small companies that are highly dependent on computer networks and the Internet to affect trades in client accounts, track performance and provide accurate reporting to clients. They are required by law to have established disaster plans and to preserve records of transactions that can be reviewed by securities regulators.

Johan will address steps advisers should take to assure the security of their IT assets, where their greatest vulnerabilities lie, mistakes Cebic Technologies has seen companies make and how to avoid those mistakes. Johan is a frequent speaker at industry events and has taught college level computer security courses for the past five years.

Cebic Technologies was founded in 1997 to provide security solutions for entrepreneurial businesses, including remote intelligence monitoring of computer networks, virus screening, software updates, hardware and software status control and intrusion detection.

For more information, contact Cebic Technologies at 1-888-232-4226 or visit www.cebic.com.
